Inspinia Aircon Gateway Smart Climate Control

The Inspinia AirCon (ACI) system enables seamless control of air conditioning indoor units through Wi-Fi connection, offering users a modern and convenient way to manage indoor climate. Each ACI device, connected to its respective AC unit, communicates wirelessly via a central router. This router not only facilitates smooth interaction between devices but also links them to the Inspinia Touch Panels and the SkyThings Mobile App.

Smart Integration for Advanced AC Control

In addition to its basic functionality, the ACI system optionally supports KNX and Modbus modules for enhanced AC control. These modules expand compatibility with Building Management Systems (BMS), enabling integration with KNX for unified control of smart devices or Modbus for communication with industrial controllers. The system also connects natively to supported AC brands, making it ideal for managing AC units in large-scale environments.

Functions & Overview

Air Conditoner Gateway

-  Compatible with Major AC Brands
-  Compact Design
-  Built-in Communication Ports
-  Optional KNX and Modbus Interfaces
-  Digital Input/Output (I/O) Functionality
-  Remote Control via SkyThings Products
-  Wi-Fi Connectivity
-  Wide Operating Temperature Range

About Us

INSPINIA Technology is a leader in smart home and building automation, offering cutting-edge solutions that enhance comfort, security, and energy efficiency. We specialize in designing user-friendly products such as touch panels, gateways, servers, and add-ons for seamless integration with AC Systems and BUS protocols. Our mission is to improve everyday living and working environments by providing intuitive, reliable technology that empowers users to control and automate various functions from one central platform. Committed to innovation and customer satisfaction, INSPINIA sets the standard for excellence in smart automation worldwide.
